The circus had an attendance of 7,245 people in the bleachers and 1,877 people in the box seats for the Friday night show. How many people attended the circus altogether?

Find $7,245 + 1,877$.

Estimate $7,200 + 1,900 = 9,100$

1

Add the ones.

5 ones + 7 ones = 12 ones
Regroup 12 ones as 1 ten and 2 ones.

2

Add the tens.

1 ten + 4 tens + 7 tens = 12 tens
Regroup 12 tens as 1 hundred and 2 tens.

3

Add the hundreds and thousands.

1 hundred + 2 hundreds + 8 hundreds = 11 hundreds
Regroup 11 hundreds as 1 thousand and 1 hundred.
1 thousand + 7 thousands + 1 thousand = 9 thousands

$$\begin{array}{r}
 1 \quad 1 \quad 1 \\
 7,245 \\
 + 1,877 \\
 \hline
 9,122
 \end{array}$$

Check for reasonableness.

9,122 is close to the estimate of 9,100.
The answer is reasonable.

$$7,245 + 1,877 = 9,122.$$

On Friday night, 9,122 people attended the circus.

Problem Solving

- 10. PRACTICE** **Use Algebra** Rachael ran 3,012 meters on Monday and 5,150 meters on Wednesday. How many meters did she run altogether? Write a number sentence with a symbol for the unknown. Then solve.

$3,012 + 5,150 = \blacksquare; 8,162$ meters
